

Custom, Hardened Windows IoT LTSC Enterprise for Medical Devices

The Challenge in Medical Device Development

Many medical devices use Windows IoT Enterprise, but the out of the box OS is not hardened to meet the strict security and compliance needs of FDA regulated devices. Hardening and securing Windows requires specialized knowledge and resources that could be better spent on actual product development.

Introducing **MEDOS**

MedAcuity's **MED OS** customizes Windows IoT Enterprise to address these challenges, providing:

- **Hardening** against security threats
- Reduced **attack surfaces** and vulnerabilities
- **Custom branding** and removal of Windows branding
- A **secure platform** for kiosk-like devices
- **Network configuration and hardening**
- **Simplified power management**
- **Deployable** OS images and patching

WHY CHOOSE **MED OS**?

- ✓ **Save time and resources** with our tailored security and OS hardening
- ✓ Ensure **FDA compliance**
- ✓ **Ongoing support** for patches and updates

Our Process

Definition Phase

We work with you to document requirements, identify target platforms, collect branding materials, and gather necessary code and certificates.

Build and Release

We configure and deliver the customized OS image with the latest patches, along with a 90-day workmanship warranty.

Ongoing Support

We offer monthly/quarterly updates for security patches, driver updates, and other required software.
